FlashStart, a world leader in Cyber Security

FlashStart is one of the **world's leading DNS security** and filtering companies. It was born from the great passion for Internet security of a team of experts in the IT world.

The **new FlashStart:**
innovation
on its way!

Tens of millions of people protected worldwide

Chosen by more than 700 Partners

Distributed in more than 156 countries

Billions of accesses protected per day

Millions of threats blocked per day

Strong Points

Global **Anycast** Network

Artificial Intelligence

Geoblocking

100 blacklist categories

Safe search

Detailed reports

Protection of End Points

Integration with Active Directory

Quality chat support

Quality pricing

Compliant with regulations

Easy installation

FlashStart Product Line

FlashStart[®]
INTERNET PROTECTION

The new FlashStart:
innovation
on its way!

Pro & Pro Plus

The DNS filter for **Businesses, Schools** and **Public agencies**.
Ideal for **MSPs** and **Retailers**.

ISP, WISP & Telco

The centralised filter for **protecting ISP infrastructures**
and **their users**.

innovation
on its way!

Some of Our Partners

Strategic alliances

Important innovations

We are excited to share with you the **amazing new version of FlashStart**. This revolutionary release will bring with it important innovations in the field of cyber protection, including:

- » **APP-Blocker**: selects and blocks unwanted applications.
- » **IP-Blocking**: Prevents access to websites hosted on compromised servers.
- » **DNS over HTTPS (DoH)**: Encrypted DNS protocol.
- » **Instant push**: Instantly disseminates changes around the world.

We will present in today's webinar all the new features introduced by this exciting new version!!!

The **new FlashStart:**
innovation
on its way!

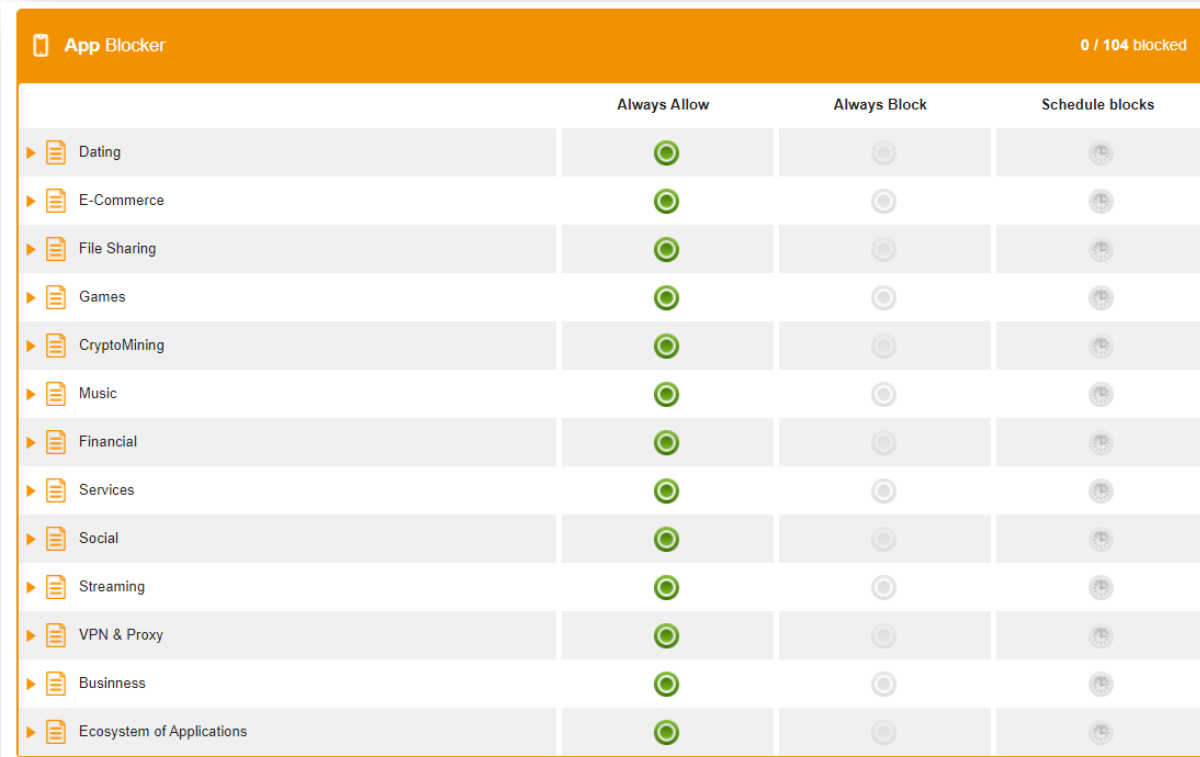

APP-Blocker

Through application blocking, it is possible to exclude, through certain modes, what are the possible distractions of users:

- » video games
- » music
- » dating apps
- ...and much more.

The flexibility of FlashStart allows the user various and customized solutions with features that characterize filtering making it convenient and practical. We can **block apps** deemed most dangerous according to the user and unblock those deemed non-offensive and free of danger with, in addition, **the ability to schedule blocks and elements**, banning access to certain content only within a time slot.

The new FlashStart:
innovation
on its way!

The screenshot shows the 'App Blocker' interface with a header bar indicating '0 / 104 blocked'. Below the header is a table with three columns: 'Always Allow', 'Always Block', and 'Schedule blocks'. Each row represents a category of apps, with a green circle indicating 'Always Allow' and a grey circle indicating 'Always Block'. The 'Schedule blocks' column contains a clock icon for each category.

	Always Allow	Always Block	Schedule blocks
Dating	<input checked="" type="radio"/>	<input type="radio"/>	
E-Commerce	<input checked="" type="radio"/>	<input type="radio"/>	
File Sharing	<input checked="" type="radio"/>	<input type="radio"/>	
Games	<input checked="" type="radio"/>	<input type="radio"/>	
CryptoMining	<input checked="" type="radio"/>	<input type="radio"/>	
Music	<input checked="" type="radio"/>	<input type="radio"/>	
Financial	<input checked="" type="radio"/>	<input type="radio"/>	
Services	<input checked="" type="radio"/>	<input type="radio"/>	
Social	<input checked="" type="radio"/>	<input type="radio"/>	
Streaming	<input checked="" type="radio"/>	<input type="radio"/>	
VPN & Proxy	<input checked="" type="radio"/>	<input type="radio"/>	
Business	<input checked="" type="radio"/>	<input type="radio"/>	
Ecosystem of Applications	<input checked="" type="radio"/>	<input type="radio"/>	

IP-Blocking

Through **IP-Blocking**, it is possible to prevent access to websites hosted on compromised servers.

This new feature makes it possible for a user, with our DNS server, to **block the IP directly**, preventing any other attack attempts.

This feature makes it possible to **block all domains that pass by a certain IP address**. This allows the user to avoid hand-writing every domain that passes by that certain address.

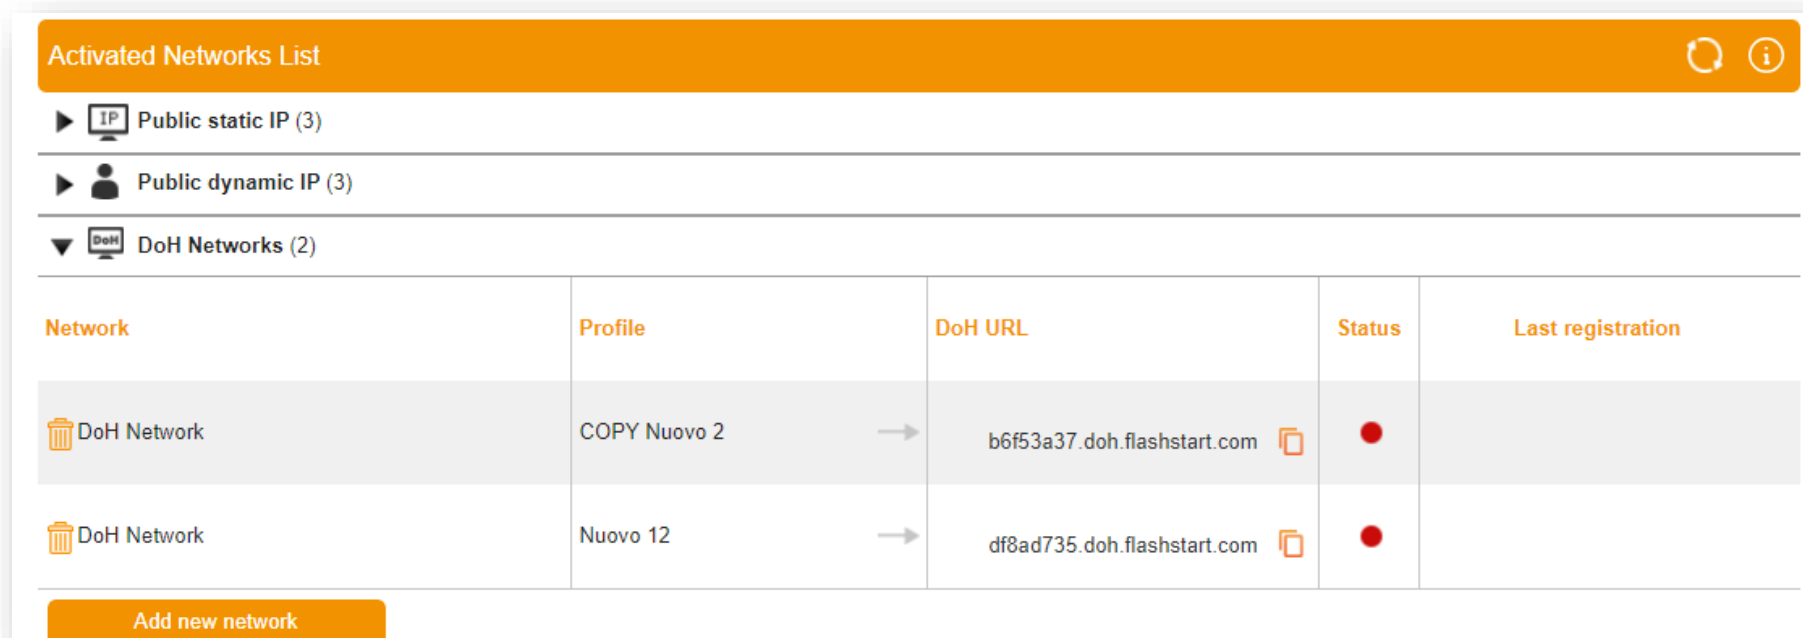

DNS over HTTPS (DoH)

DNS over HTTPS is an encrypted DNS protocol.

Previously, with the simple DNS protocol, when a DNS request was made from the PC to the Router or any other device, everything was in the clear, i.e., visible to possible cyber attacks such as DNS Spoofing.

Using FlashStart's ClientShield, all packets were closed within a secure VPN connection.

Now, **with the new DNS over HTTPS feature, all requests are made natively under this protection:** thus the entire processes are encrypted and certified by the SSL/TSL protocol, thus safe from any malicious attack.

The screenshot shows a web interface titled "Activated Networks List". It features a table with columns for Network, Profile, DoH URL, Status, and Last registration. There are two entries under "DoH Networks (2)".

Network	Profile	DoH URL	Status	Last registration
DoH Network	COPY Nuovo 2	b6f53a37.doh.flashstart.com	●	
DoH Network	Nuovo 12	df8ad735.doh.flashstart.com	●	

Instant push

Another new feature for the new FlashStart is **Instant push**, which instantly spreads changes around the world, **any changes made on one's profile configuration** from the Cloud panel will be instantly applied globally to all configured devices.
