What is FlashStart

Cloud

FlashStart cloud is the right malware and unwanted content filtering solution for every type and size of customer.
FlashStart provides protection services from geographically dispersed data centers using anycast network technology, ensuring **high service** availability and **low latency**.
Different versions are available, both with **highly technical professional support** and customized features.

Version **Pro**

Is the professional DNS-based content and malware filter, with clear and comprehensive reports, which guarantees a protected and lawful internet browsing.

Version **ProPlus**

It offers all the features of the Pro version, and adds enterprise features such as integration with **Microsoft's Active Directory**, **App Blocker**, **IP-Blocking**, **granular protection** based on users and groups, and support for remote device (PC,Tablet and Mobile).

Dedicated to the channel

FlashStart is the **ideal Integration** for all service providers such as Resellers, MSPs, ISPs and WISPs. It supports all types of integration (APIs, provisioning, etc.), local and hybrid (Cloud + local cache) deployment models, and white labels.
Management is done centrally on a comprehensive and easy-to-use **multi-tenant dashboard**.

Easy to install and deploy

Version **Pro**

The Pro version does not require any hardware or software, but uses the DNS protocol found in every router and/or network device. Through simple and clear wizards, filtering can be activated in minutes.
FlashStart's implementation offers excellent resilience against indiscriminate network use and attempts to circumvent protection.

Version **ProPlus**

The ProPlus version is natively integrated with the Microsoft Active Directory environment, and synchronization is via a connector that can be installed on the Domain Server.
The solution also includes a local DNS Proxy that can be activated on a virtual machine (VMware, Hyper-V KVM, etc.) or on third-party hardware.

FlashStart is for **all**

Resellers, MSPs, ISPs and WISPs, Enterprises, PAs and many more are among the major users of FlashStart.

Simple, fast, powerful, compatible with all devices.

Main features

Content filter
Protects users while browsing by blocking unwanted, dangerous and illegal content.
Allows high customization of protection by selecting from over 200 categories of system blacklists, updated constantly.

Granular protection and MS-Active Directory integration
Allows the use of diversified filtering policies for users, groups, and devices of various types.
Supports, through native connectors, synchronization with Microsoft's Active Directory.

Report and analysis
It provides the network administrator with clear and comprehensive reports to analyze the use of the Internet resource and quickly detect, including email scheduling, any threats to the security of their Organization.

Anycast Global Network
FlashStart is deployed worldwide with a guarantee (uptime) of 99.99999% uptime thanks to a network of highly reliable redundant datacenters.

APP-Blocker
Through app blocking, possible distractions to users can be eliminated. FlashStart's feature allows users to block apps deemed most dangerous and unlock those deemed non-offensive and free of danger.

Preventing against malware and threats
Protection from malware attacks, botnets, phishing, ransomware and other threats through an intelligence network capable of early detection of major sources of risk.

Geoblocking
Ability to inhibit access to websites located in countries at high risk of Cyber attacks, so as to limit the risk of compromise to the Organization.

Dashboard multi-tenant
Allows Partners to manage the protection of their entire customer base through a unified interface, useful to both the technical and sales departments for access to licenses and marketing tools.

Among the top 3 in the world
Certified on the independent benchmark Dnsperf as.
DNS Resolver among the top 3 fastest worldwide.

IP blocking
Through blocking by IP, it is possible to prevent access to websites hosted on compromised servers. This new feature makes it possible for a user, with our DNS server, to directly block the IP preventing any attack.
